Screen Flow Specialist Superbadge

You've earned yourself the most super of badges, and a ton of points. Now tell the world about it!

+ 1000 Challenge Points
+ 500 Bonus Superbadge Points

Prerequisites

Approval Process Specialist Superbadge

Flow Elements and Resources Specialist Superbadge

Screen Flow Specialist Superbadge

Process Automation Specialist Superbadge

Next, I have completed the Process Automation Specialist Superbadge by completing the following three quizzes:

(1) Working with approval processes. (MCQ-based task)

1 Which of the following is a configuration available in Approval Process Setup?

A Prevent submitters from recalling approval requests.

B Select Initial Submitters from a picklist field on the record entering the approval process.

C Add the Submit for Approval button and Approval History related list to all of the object's page layouts.

D Display approval history information in the utility bar of an app.

2 Users indicate that approval requests are routed to the wrong department. What should a system administrator do to resolve this issue?

A Review the entry criteria.

B Add a collection filter.

C Remove the criteria formula.

D Use custom code.

3 Which workflow action is available upon approval or rejection after configuring an approval step?

A Visualforce display

B External notification

C Chatter post

D Field update

(2) Working with Flow elements. (MCQ-based task)

1 Why should a system administrator use an Assignment element in a flow?

A To retrieve elements used in prior steps of a flow

B To set values that will be used later in the flow

C To hold a set of values to exclude from steps later in the flow

D To assign permissions to a user

2 Which of the following is an accurate description of a flow element?

A Collection Filters apply criteria to a collection and then assign the filtered records to a new recordset.

B Decision elements are used in screen flows to provide a predefined set of choice options to a user.

C Delete Records elements reference record IDs stored in a collection filter.

D Get Records elements find records that meet filter conditions and store values in variables.

3 Which statement is true regarding flows that contain a Delete element?

A If no records match the Delete element criteria, the flow will trigger an error.

B Records meeting criteria are not deleted when testing a flow in any state.

C Records pending approval are not deleted when testing an inactive flow.

D Deleted records are sent to the recycle bin for 30 days before being permanently deleted.

(3) Working with screen flow configuration.

1 **What statement is true regarding how automations run in system or user context?**

A Screen flows run in user context by default.

B Record-triggered flows run in system context by default.

C Scheduled-triggered flows run in system or user context.

D Screen flows run in system context by default.

2 **What aspect of Flow Screen Output Components should a system administrator consider when building screen flows?**

A Each screen component requires a header and footer.

B Create Screen component layouts can display input in one or two columns.

C Conditional visibility rules for a section affect all components and fields in that section.

D Default column widths for all flow layouts are set in Process Automation Settings.

3 **Which statement is relevant about validating input on a screen flow?**

A Screen flows automatically reference object-level validation rules to ensure consistency.

B Help Text should be used in screens to advise users about required input.

C Component validation doesn't allow custom error messages.

D Screen component validations trigger error messages when certain conditions are met.

Finally, I have completed the Process Automation Specialist Superbadge, the screenshot of completion of this Specialist Superbadge is as follows:
