## Flow Elements and Resources Specialist Superbadge

Firstly, I have completed all the three prerequisites Superbadge Unit for unlocking this Specialist Superbadge and that are being listed below:

(1) Flow Fundamentals Superbadge Unit.

WOOHOO!

Flow Fundamentals Superbadge Unit

You've earned yourself the most super of badges, and a ton of points. Now tell the world about it!

+ 2000 Challenge Points
+ 500 Bonus Superbadge Points

(2) Flow Optimization Superbadge Unit.

WOOHOO!

Flow Optimization Superbadge Unit

You've earned yourself the most super of badges, and a ton of points. Now tell the world about it!

+ 1500 Challenge Points
+ 500 Bonus Superbadge Points

(3) Flow Administration Superbadge Unit.

WOOHOO!

Flow Administration Superbadge Unit

You've earned yourself the most super of badges, and a ton of points. Now tell the world about it!

+ 1500 Challenge Points
+ 500 Bonus Superbadge Points

Prerequisites

Flow Fundamentals
Superbadge Unit

Flow Optimization
Superbadge Unit

Flow Administration
Superbadge Unit

Flow Elements and
Resources Specialist
Superbadge

Next, I have completed the Flow Elements and Resources Specialist Superbadge by completing the following three quizzes:

(1) Working with Flow Elements.

1 Dreamscape's sales team wants an automation that updates an account's record and all related contacts when the account Is Active field is unchecked. Which automation should the admin configure to update the current record and all related contacts?

A   Record-triggered flow with Fast Field Updates

B   Record-triggered flow with Actions and Related Records

C   Autolaunched flow with Actions and Related Records

D   Scheduled-triggered flow

2 A Dreamscape competitor has an inside customer service center. Agents answer thousands of support calls daily. Typical requests include a series of questions that vary by issue type. Which flow type captures case details most effectively and quickly?

A   Record-triggered flow with Fast Field Updates

B   Record-triggered flow with Actions and Related Records

C   Autolaunched flow

D   Screen flow

3 What happens if a flow executes a decision element but no defined outcome element conditions are met?

A   The flow takes the path for the default outcome.

B   The flow terminates and any changes are rolled back.

C   The flow takes the first path configured.

D   The flow skips to the next decision element.

(2) Flow Optimization.

1 What is true when working with loops within a flow?

A Create separate collection variables for use in a loop rather than reusing a variable.

B A maximum of 1,000 new records can be created within the loop.

C Individual records are edited within the loop after turning governor limits off.

D The collection variable is populated with Get Records as the first element within the loop.

2 What is a benefit of a collection filter element?

A Collection filters are designed to work with lower processing limits.

B Collection filters can replace loops, resulting in simpler flows.

C Collection filters overwrite a collection passed in a flow.

D Collection filters generate a transitory record variable for single use.

3 Which statement about data manipulation language (DML) and loops is true?

A Use an Update Records data element inside For Each elements to avoid issues with DML in loops.

B Use an Update Records loop element to sort through very large collections of records.

C Use a Create Records data element if you need to use DML actions inside a loop.

D Use any Create, Update, Get, or Delete Records elements outside any loops.

(3) Working with multiple automations and their settings.

1 What is a best practice regarding system context relating to flows?

A Configure a flow to run in system context with sharing to allow users to change records they would otherwise not be able to access.

B Configure a flow to run in system context without sharing to override the running user's record-level access to data.

C Configure a flow to run in system context without sharing to enforce the running user's record-level access to data.

D Configure a flow to run in system context with or without sharing to allow users to change records they would otherwise not be able to access.

2 What is a consideration regarding flows installed from managed packages?

A Admins can only activate or deactivate the flows.

B Admins can open and see details of the flows.

C Admins can edit the template flows.

D Admins can see details of template flows but cannot edit them.

3 Which statement regarding flows' trigger order value and application programming interface (API) names relating to flow execution is correct?

A Multiple flows with the same trigger order value run in alphabetical order based on the flows' API names.

B An admin can configure trigger order value to prioritize an after-save flow to run before a before-save flow.

C Multiple flows relating to a certain object must have a unique trigger order value.

D Flows without trigger order values run in alphabetical order based on the flows' API names.

Finally, I have achieved the Flow Elements and Resources Specialist Superbadge, the screenshot of completion is as follows:

WOOHOO!

Flow Elements and Resources Specialist Superbadge

You've earned yourself the most super of badges, and a ton of points. Now tell the world about it!

+ 1500 Challenge Points
+ 500 Bonus Superbadge Points
